Testing Battery Options (Batteries can be tailored for individual needs and to address the specific referral question).

1. **Comprehensive:** This would be beneficial for individuals who have never had testing, or who need updated testing. In addition, this is ideal for individuals who have that span a wide variety of clinical areas including neurodevelopmental functioning (e.g., ADHD, etc), about learning differences (dyslexia, dysgraphia, etc), cognitive impairment, and concerns about clinical symptoms (anxiety, trauma, depression, personality disorders, disordered eating, substance use, etc.). \$3150
2. **Neuropsychological:** This would include the Comprehensive testing and also incorporate additional neuropsych measures to identify specific areas of concern related to memory, Autism, executive dysfunction, traumatic brain injuries, dementia, cognitive decline, etc). \$3500
3. **Personality -** This is good for students with recent cognitive/educational testing but do have clinical concerns. This could also be helpful for adults with no neurocognitive (e.g., ADHD, TBI, memory, etc) concerns but have mental health symptoms. \$2500
4. **Vocational Personality -** This would be similar to the Personality battery but adds career testing. \$2700
5. **Psychoeducational -** This is ideal for students who need updated education and cognitive testing, but there are not pressing clinical concerns. \$2,000
